

Metric Met/Not Met Scoring Algorithm

Last Updated: September 28, 2023

Scoring System

Step 1: Determine the Target Comparison

If Metric Actual Date falls in fiscal year 2024 (10/1/2023 – 9/30/2024) use parent Metric CY Target for *Comp Target*

If Metric Actual Date falls in fiscal year 2023 (10/1/2022 – 9/30/2023) use parent Metric PY Target for *Comp Target*

- If parent Metric PY Target = null then set Met / Not Met = **Can Not Determine**

If Metric Actual Date falls in fiscal year 2022 (10/1/2021 – 9/30/2022) use archived parent Metric PY Target (from BY 2024) for *Comp Target*

- If archived parent Metric PY Target (from BY 2024) = null then set Met / Not Met = **Can Not Determine**

If Metric Actual Date is not part of fiscal year 2022 through fiscal year 2024 (10/1/2021 – 9/30/2024) set Met / Not Met = **Can Not Determine**

Step 2 Run Comparisons

If parent Metric Measurement Condition = 'Over Target' and Metric Actual Result \geq *Comp Target* then set Met / Not Met = **Met**

If parent Metric Measurement Condition = 'Over Target' and Metric Actual Result $<$ *Comp Target* then set Met / Not Met = **Not Met**

If parent Metric Measurement Condition = 'Under Target' and Metric Actual Result \leq *Comp Target* then set Met / Not Met = **Met**

If parent Metric Measurement Condition = 'Under Target' and Metric Actual Result $>$ *Comp Target* then set Met / Not Met = **Not Met**
